

Göttingen, 12 Aug. 1864.

My dear Sir,

In my last letter containing the rest of my observations
on Wright's plants I forgot to mention
two numbers, which proved to be cryptogamous, viz.

no. 792 *Salvinia hispida* Kth. (compare with an
authentic specimen)

no. 791. *Riccia* sp., one of the common floating species.
Dr. Wulke, the monographer of *Lepidium*, informs me
that among Wright's last ferns there occurs *Lepidium*
elongatum W.: he saw it in *Wulke's herbarium* at Hagen.
Have the ferns of the last set not been published? if
so, I beg for a copy of the plants.

I believe not yet to have answered to your questions
about an exchange of duplicates (see your letter of
March 18). I think it better, that you do not transmit
entire undetermined parcels of Wulke's plants, as, having
now to study a large Guiana collection left by late
Mrs. Wulke-Schlagel, I know not at what time I
could do anything else. Yet duplicates of your collections
will always be very acceptable. — A distribution of
Wulke's duplicates shall, I hope, take place this
winter, but they are by no means numerous, the
bulk of the materials having been sent back to
Kew.

I beg to forward the annual page & Dr.
Engelmann.

Ever yours affectionately

M. Schlecht
